Subject : Technical review of the Saral Bitta® (Simple Finance®) software

Dear Sir,

The demo of the Saral Bitta® (Simple Finance®) software on first week of May 2006 was very impressive and promising. We are very much pleased to see the software which can make the SFCL's daily work very easy, quick and reliable.

I would like to emphasize my thought of the software with the following categories.

1. Navigation:
Navigation of the software is very good because of its nepali language interface. Minimum understanding of English language is required which enables local user to use the software easily. Because of easy navigation, less time is required to monitor, retrieve and analyze account information to observe financial transactions, history and forecast.
2. User friendliness:
It has a very good user interface with a nepali language which enables users to navigate easily. Menus are well placed in the main page with good navigation into Journal, Loans, and Accounting etc. And most frequently used modules are grouped under daily activities. The colors used are also very simple and good looking. Different reports and vital information can be retrieved very easily and quickly via different multiple searching facilities. Eg. By name, account number, loan type, etc.
3. Scalability:
Because of the system architecture; a localized user-interface with relational database, additional functionalities can be added easily. It can be customized easily according to requirements.
4. Data Integrity:
The data are centralized, which reduces redundancy, updates, modification, verification and correction time instantaneous, thus increasing the productivity of the employee. These information are protected and are only accessible by authorized users. Different security levels like manager (Administrator) and users, helps prevent unauthorized access to the software which is very good.
